Registration	The login interface is designed with the framework	Added login function	Be able to fill the registration information into the database	Some tests were carried out
Create item	Designed the general appearance	Design out the appearance of static web page	Be able to read the goods uploaded by users	The ability to store data in a database
Database mode	The general appearance of the database is designed	The table was created in the database	Be able to connect the front end with the database	Fixed a bug in the database
Reviews	The appearance of the comment interface is designed	The function of comment is added in flask	Ability to store comments in a database	Removed comments from sellers
Error Handling	The display of the home page is misplaced	Unable to distinguish between buyer and seller when logging in	Unable to store user information	Sellers can also comment under the item, which is not allowed

Test Script

The landing page of the application will be accessed. The 'search-by-category' feature that allows a user to view items by category will be tested.

The details of one of the items on the landing page will be assessed. The user should be able to see the comments posted on the item

On trying to create item, the user should be prompted to a login page.
